SUPERIOR CEDAR GREENHOUSES
ENGLISH HERITAGE IN WOOD

©The Royal Horticultural Society. Registered Charity No. 222879

*Gabriel Ash are proud to announce the unique endorsement of all their products
by The Royal Horticultural Society (RHS).*

*Through their 200 year history, the RHS have earned a world famous reputation for horticultural excellence
in practice and design and now consider Gabriel Ash products worthy of their approval.*

*Gabriel Ash Cedar Greenhouses, Glasshouses and Cold Frames are of superior design produced to the highest standards
and quality considered to reflect the Society's standard of excellence.*

Gabriel Ash are also proud to announce that their greenhouses and coldframes are PEFC Certified.

*PEFC works throughout the entire forestry supply chain to promote good practice in the forest and to ensure that timber
and non-timber forest products are produced with respect to the highest ecological, social and ethical standards.*

rural HERITAGE”

The ESSENCE
of GABRIEL ASH

Timeless SIMPLICITY

PRIDE *of* CRAFTSMANSHIP

H O N E S T Y

O F D E S I G N

In today's world we are reliant on machine. Design is driven by cost, with mass production a necessary part of modern life. Skills that took a lifetime to master, which were then passed on to the next generation, are becoming a thing of the past. At Gabriel Ash we remain one of the few companies that still puts its faith in those rare time honoured skills.

Consider the qualities invested in the finest handmade wooden furniture in your home, we wouldn't expect you to accept anything less, simply because it's going in your garden. Where, if anything, it needs additional qualities. So, although a Gabriel Ash greenhouse isn't radical or revolutionary in appearance, closer inspection reveals a very different story.

A seamless blend of wood and glass; discreetly incorporating aluminium and full-ridge ventilation; only using the finest quality of Western Red Cedar. Gabriel Ash has created a timeless range of exquisite greenhouses that remains true to our roots in terms of quality and design.

No one understands the importance of preserving British heritage more than Gabriel Ash, and no institution applauds this more than the Royal Horticultural Society. Which is why they were the first to endorse our products, and why you'll find an exclusive collection of RHS greenhouses in the Gabriel Ash range.

Red CEDAR
CELEBRATES
THE WARMTH
STRENGTH & INTEGRITY
OF THE TRADITION
IN RURAL
CRAFTSMANSHIP

The Planthouse
Approximately 8 x 10 foot

The raw material from which every Gabriel Ash greenhouse is constructed is, like gardening itself, life affirming. Western Red Cedar (*Thuja plicata*) contains natural oils that resist moisture decay and infestation.

Being very straight-grained, it neither warps or twists, absorbing and rapidly releasing moisture with minimal shrinkage or expansion.

Using age-old techniques and the values of traditional craftsmanship, this superior wood can be honed to a superb finish: a pleasure to both the eyes and the touch. In our long experience, nothing is more appropriate for fine English gardens than the warmth, beauty and character of wood. For us, this means only the finest selected Western Red Cedar.

WITH THE FUSION
of TRADITION
and technology
GABRIEL ASH
STANDS HEAD &
SHOULDERS
above THE rest

As affluent consumers living in a fast-moving world, we aspire to even more sophisticated products to meet our high standards. What makes a Gabriel Ash so different, is the unique design and development that fulfils the highest expectations of quality, dependability and performance. Look first then at what you won't find in a greenhouse bearing our name.

Whilst remembering that greenhouses aren't waterproof structures, we have eliminated areas that can be vulnerable to moisture, rejected the traditional method of overlapping panes of glass in favour of toughened safety glass and consigned conventional opening roof lights, roof ridges and door runners to gardening history.

Furthermore, all of our greenhouses feature aluminium capping, gutters, down spouts and plinths for all-weather protection and unrivalled endurance. The result is a product that integrates our extensive experience with today's technology to create superior cedar greenhouses for the 21st century.

VENTILATION

As every hardened greenhouse gardener knows, ventilation is the key to growing and maintaining healthy plants in the greenhouse, especially through the summer months. This is where many greenhouses let their owners down with inadequate ventilation that stifles growth and allows disease to breed.

Superb ventilation is what sets a Gabriel Ash greenhouse apart from the rest. All our greenhouses have the unique Gabriel Ash automated roof ventilation. Situated at the highest point of the greenhouse to let the hot air rise and escape naturally, the vents run the entire length of the ridge.

Gabriel Ash greenhouses don't rely on circulation of stale air to cool the greenhouse down. Hot air rises naturally and escapes at the ridge drawing cooler air into the greenhouse from the vents below. Even more satisfying, this is all done automatically without you having to lift a finger!

Not only is a Gabriel Ash structure a perfect place for plants, due to our ventilation system it's a perfect place for people too!

THE CLASSIC

Whatever the size your garden there is a Gabriel Ash Classic greenhouse that will ideally suit your needs.

Available in a variety of widths from 6ft through to 16ft and virtually limitless in length, in multiples of 2ft, The Classic range has long been our customer's favourite model of greenhouse, for both amateurs and professional alike.

The Classic Eight.
Measuring approximately 8ft x 10ft.

Made using only the finest Western Red Cedar and supplemented with aluminium in all the key areas, our Classic structures are designed to be just that - classic. They have the flexibility to incorporate dwarf walls where requested, various different door options, and the usual extensive range of accessories. All these options means there is a Gabriel Ash Classic greenhouse for everyone.

THE ROSEMOOR

One hundred years on from the 'Belle Epoque' that inspired so many garden buildings we still use the time honoured methods of construction that are part of our heritage in the production of the elegant and functional RHS Edwardian Collection.

All our greenhouses are crafted from natural Western Red Cedar by time served joiners on the bench in our Cheshire workshop. The RHS collection captures the rugged period construction and will not only enhance your garden but will be an architectural focal point.

The Rosemoor is the smallest in the range but the generous eaves height combined with a 45 degree pitch on the roof make it deceptively spacious and elegant.

The Rosemoor.
Measuring approximately 6ft x 8ft.

THE HYDE HALL

The Hyde Hall comes with all the features typical of the RHS Collection. Featuring our unique automated roof ventilation system, and internal aluminium bracing for extra rigidity. In typical Gabriel Ash fashion, the Red Cedar is machined to a furniture like finished, and topped off with beautiful hand turned finials.

For the ultimate gardening enthusiast, integral cold frames can be added to the Hyde Hall, as indeed they can be to any model in the RHS Collection. The addition of a side of cold frames will create an even more versatile and flexible growing environment.

The Hyde Hall.
Measuring approximately 8ft x 10ft.

THE WISLEY

Naturally we have added our unique automated roof ventilation and all this is topped off with hand turned cedar finials. This range can be located on low walls, as were traditional Edwardian Glasshouses, or free standing with warm cedar cladding.

To ensure that strength is added to elegance we have combined the beauty of timber with our engineering expertise and designed a belt and braces strengthening to the structure with discreet aluminium portal frames, strong enough in fact to last another 100 years.

The Wisley.
Measuring approximately 9ft x 12ft.

THE HARLOW CARR

The entire RHS range of structures has been designed with classic proportions in mind. The largest of which, the Harlow Carr, is perfect for growing palms, fruit trees or even more tropical plants.

Partitions can be added should you wish to have areas of differing temperatures and so increase your growing possibilities.

Or just add a chair to relax and take in the atmosphere of your new greenhouse.

The Harlow Carr.
Measuring approximately 12ft x 15ft.

THE PORTICO

Perhaps the most sought after model in our RHS range, the Portico, is without question a most visually pleasing structure. Starting at a rather modest 9ft x 12ft with a central porch, the Portico and Grand Portico range of structures can increase to over 15ft in width and extended to whatever length your garden and pocket will allow.

When extra growing space is required, coldframes can be added to either side of the porch, and as with all our structures the Portico's can be designed to sit on low walls to replace the low cedar panels.

The Portico.
Measuring approximately 9ft x 14ft plus porch.

THE RHS VINEHOUSE

Whether your garden is large or small, if you have a south facing wall it can be utilised with an RHS Vinehouse or Grand Vinehouse.

The Vinehouse got its name from the wide array of grape vines that were grown in them during the Victorian era. The higher eaves height at the rear made the greenhouses perfect for vines as they could become established before having to mould to the shape of the roof.

At 6ft and 9ft in width and virtually limitless in length these structures are an ideal addition to any walled garden.

As with all our RHS greenhouses, the Vinehouse comes with cedar panels to the bottom of the curtain wall as standard but could quite easily have a dwarf wall to replace the panelling.

NOTHING
GROWS OLD MORE
gracefully
REMAINING
SOUND SOLID *and*
BEAUTIFUL
for DECADES

THE VINEHOUSE

With the good fortune to have a substantial south facing wall come's the opportunity to create a cedar version of a traditional Victorian Vinehouse. Unlike a mono-pitched lean-to, the dual pitched roof of a Vinehouse doesn't require the wall to be as high, and with the warmth retaining qualities of the wall and classical looks it is equally ideal for oranges, peaches, peppers or tomatoes.

With Vinehouses of all sizes from 4ft x 6ft - 12ft x 50ft there is a structure to fit virtually any space, and with the option of a cedar back instead of the wall, a Gabriel Ash Vinehouse can go virtually anywhere.

THE LEAN-TO

Lean-to's can also provide a space-saving solution for smaller gardens areas. By utilising existing garden walls or buildings less precious garden space is taken up.

You may choose a glass-to-ground model to maximise the light, have the base panelled with cedar to soften and insulate or add a low wall to give an air of permanence and synergy with your home.

Large walls often suggest a Lean-to greenhouse as the most practical option. Attached to the wall, these can be extended in length to maximize all the available wall space. As with most greenhouses in our range our Lean-to's can be designed to sit on a traditional brick base using recycled or variegated bricks to match the surrounding buildings, or have cedar base-panels to optimise the retention of the sun's rays.

Premium grade red cedar is used throughout even down to the staging and with carpentry that invites comparison with the finest furniture in your home we know that for you the garden is no place to compromise.

THE COMBINED GREENHOUSE AND GARDEN SHED

Made to the same high standards as the rest of the greenhouse range, the RHS Combi's take our most popular RHS greenhouses and adds a cedar shed to the rear for greater flexibility.

With the Rosemoor, Hyde Hall or Wisley at the front and a shed proportionate to the greenhouse at the rear, what was once a utility building is now a thing of beauty. The shed section is split from the greenhouse by a cedar gable with a door sized opening (although the door is omitted to allow heat to filter from the greenhouse to the shed) and the shed can even have a door at the rear in addition to the greenhouse door at the front (at a small additional cost).

The Combined Greenhouse and Garden Shed.
Shown here combined with The Rosemoor from our RHS Collection.

THE GROW & STORE

Where space is at a premium, why not combine growing and storage with The Grow & Store. With half a greenhouse and half a shed, this structure is perfect for those not able to accommodate both.

Access from the greenhouse to the shed is through the space saving sliding door in the vertical wall dividing the two sections. Whilst the standard grow and store is approximately 9ft x 8ft, as with all the models in the Gabriel Ash range of greenhouses, the structure can be extended.

The Grow & Store.
Measuring approximately 9ft x 8ft.

BESPOKE STRUCTURES

At Gabriel Ash we pride ourselves on our flexibility and, within reason, we can accommodate most clients wishes for their new greenhouse.

Although we have a large range of standard structures, sometimes the space dictates that only a custom made structure will do. Taking either the Classic range or the RHS range as a starting point, we can tailor the greenhouse to fit exactly in the space required. Whether this be by extending the length of one of the standard structures, or by designing the structure around your existing base, you need only ask.

To make it easier all our bespoke structures are installed by Gabriel Ash and in most cases our Technical Office staff visit the site first to take all measurements required.

Despite being bespoke the greenhouses come fitted with all the usual Gabriel Ash features such as automatic full length roof ventilation, side windows, and a choice of doors and door positions.

To get more information and costs for your bespoke structure simply send us a sketch or an e-mail with some indication of measurements to enquiries@gabrielash.com

THE TEACHING GREENHOUSE AT RHS HARLOW CARR

Back in 2009 Gabriel Ash were approached by Lizzie Balmforth (the Curator at RHS Harlow Carr in Harrogate) with a view to installing a greenhouse at their recently funded £3.3m Learning Centre at the RHS garden.

The Teaching Greenhouse needed to be big enough to accommodate up to 30 children at a time from nearby schools all ready to learn about gardening. The structure also needed to be able to house all the equipment used in the lessons in a safe and secure area.

With this in mind Gabriel Ash constructed a special greenhouse to suit. Based on the Classic 12 and over 60ft in length the greenhouse is split into the main teaching area and a separate storage shed at the rear for all the equipment.

As always with Gabriel Ash, the structure has full length automatic vents and a number of side vents making it the perfect environment for the next generation of gardeners to hone their horticultural skills.

THE GLASSHOUSE

Like the privet hedge, the Glasshouse will always have its place in an English garden. Your bespoke Glasshouse could have a roof made of naturally-insulating Red Cedar shingle or glass, perhaps a ceramic floor, be furnished with practical elegance, display impressive sculptures or even become a poolhouse.

Whilst the really serious gardener will dedicate all the greenhouse space to propagation and cultivation, there are those who also cherish relaxation. So, although clearly designed for the well-being of plant life, the unique qualities and pleasurable ambience of a Gabriel Ash bespoke greenhouse can easily allow for some seating areas too.

Whether you want a place to contemplate or propagate, a Glasshouse adds a new dimension to your garden, to the exact dimensions you require.

C O L D F R A M E S

Amateur or professional, a Gabriel Ash Coldframe is a vital addition to your garden. Manufactured using the same high precision mortice and tenon joints as our greenhouses, each Coldframe is constructed with toughened safety glass, discreet aluminium sills and cappings.

The standard Gabriel Ash coldframes come with powder coated sills to protect against damp, and have integral stays allowing the coldframes to be propped open at 2 different heights. Alternatively for those with a little more space, or as a substitute to an additional greenhouse our Upright and Grand Upright Coldframe are ideal for overwintering small, delicate plants, and can come with integrated backs as standard.

The Baby Grand Coldframe.
Approximate dimensions: width 3ft 9in, depth 3ft & height 1ft 9in.

The Grand Upright.
Approximate dimensions: width 4ft 2in, depth 2ft 5in & height 6ft.

The Upright Coldframe.
Approximate dimensions: width 4ft 2in, depth 2ft 5in & height 4ft 7in.

The Grand Coldframe.
Approximate dimensions: width 5ft 7in, depth 3ft & height 1ft 9in.

PLANTERS & WATERBUTT

New to the Gabriel Ash range but already a popular addition, our Western Red Cedar planters come in 2 sizes, and are perfectly at home either as an accompaniment to a Gabriel Ash greenhouse, or placed either side of a stylish front door filled with an olive tree.

The Gabriel Ash waterbutt is essential for those amongst us that realize rainfall as an essential ingredient to maintaining healthy plants (should our summers be long and hot!).

Cedar Planters
Approximate dimensions: 2ft x 2ft, or 1ft 6in x 1ft 6in, height 2ft

Cedar Waterbutt
Approximate dimensions: 1ft 9in x 1ft 9in, height 4ft 2in

OLD FASHIONED
CUSTOMER
SERVICE *from*
GABRIEL ASH
ABOVE & BEYOND
your EXPECTATIONS

In essence, Gabriel Ash offer you more than just a greenhouse, we offer unique, bespoke design solutions. We don't hold any products in stock, each structure is made to order, with particular requirements noted on the production order that bears that customer's name. From your first enquiry to final delivery, our customer service is above and beyond normal expectations.

Our smaller cedar greenhouses are offered in a standard range of sizes, whose modular design, coupled with a wide range of options, make it easy to order a greenhouse to your own individual requirements. However, we're entirely flexible, so should you require a door at each end, a hinged door where a sliding door is indicated, extra opening lights or another two-foot section adding on, most things are possible. All you have to do is ask.

HOW to ORDER

FOR ENQUIRIES OR
advice *please* CALL
0 1 8 2 9 2 7 1 8 9 0
or EMAIL enquiries@gabrielash.com

From our standard "6", "8", "10" & "12" greenhouses to our largest Glasshouse, every product is made to order. Just call our advice line number above, and we'll be happy to discuss your requirements and confirm the details, the price and the delivery date. We welcome being involved, so should you require a bespoke structure you can send or email us your plans on a free consultation basis. Whatever your requirements, what we always deliver is the finest value for money. If you seriously invest time in your garden, no other greenhouse will ensure you enjoy so many years of pleasure.
